Educational Furniture. VS has always been focused on designing inspiring spaces for learning. As one of the leading manufacturers of school furniture and a full-range supplier with a wide portfolio, this is what we offer our customers: comprehensive, stimulating furniture solutions for educational establishments. In addition, we offer an extensive range of services such as planning, project support, and customer service.

Our products stand out for their quality, functionality, and durability, as has been proved by comparisons worldwide. Sustainability is extremely important to us, as is safety.

We hope you enjoy browsing, discovering new ideas, and planning your space! If you need answers to any questions, advice, or project support, our qualified customer support staff will be delighted to assist you personally.

Well-being and positive emotions *are the basis for long-term learning.*

When pedagogy, architecture, and design are aligned, the goal of meeting the physiological requirements of teachers and learners is on the path to success.

An essential starting point is considering the whole person. Each of us has complex interactions between body, mind, and emotions. These processes require needs-appropriate learning rhythms and teaching programs to inspire the curiosity and desire to discover new things. When these are met, school becomes a place of holistic well-being and positive emotions, the basis for long-term learning.

With the goal of helping students learn how to learn, responsible schools shift their focus from the standard dissemination of knowledge to leading students to individualized problem-solving strategies.

Diversity, self-organization skills, teamwork, collaboration, and project-oriented learning are integral parts of a fluid school culture. The architecture supports this ideal with specialized learning areas, quiet zones, and open learning landscapes. Equally vital, furniture that's agile enough to be quickly reconfigured according to the lesson plan and that supports healthy posture.

The hidden power of spaces.
Study, work, and living spaces have a long-term impact on our physical, mental, and social well-being. This underscores the important role spaces and furnishing play in meeting our physiological needs.

Throughout human development, our ancestors faced spatial conditions that constantly presented them with physical, mental, emotional, and social challenges. The resulting adaptive behavior is the success story of human physiology. As a species, we would not have survived by sitting still.

Successful learning engages the body, mind, and soul.
There is a strong connection between humans' perception of environment (sensory stimulation), emotional reactions, and well-being – which is the most important driving force of performance.

When you enter a room, your senses – sensory organs such as eyes, nose, ears – are exposed to an overwhelming amount of sensory information to process. However, only a small percentage reaches our consciousness, as a "filter effect" protects our center of consciousness from overloading.

What this tells us is that the majority of the information we perceive remains in our unconscious (limbic system). Nevertheless, it has a decisive influence on our emotional state and intuitive decision-making processes.

Adapted from *Spaces in Motion*, based on research by Dr. Dieter Breithecker.

Keeping our sensory organs engaged **keeps us aware and alert.**

The interaction of the sensory organs in the body, brain, and muscular system.

Our sensory organs, including those for balance and muscle activity, need regular stimulation for positive development. Movement promotes brain activity, increases circulation, and supports learning.

Fidgeting, for example, enhances focus and cognitive function. Research shows that children need frequent movement to avoid physical and mental disorganization, and students who move more perform better academically.

Muscle activity = nourishment for the brain.

*Make **peace** with* **fidgeting.**

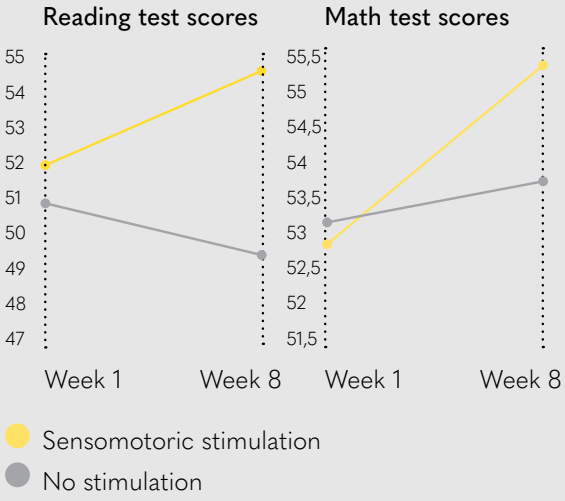
Children in particular, whose physical and mental development processes are not yet complete, require more regular movement stimuli than adults. That's how we can also explain the everyday image of a student tipping their chair back to balance it on two legs – their unconscious is ordering them to move in order to prevent emotional, mental, and physical disorganization.

Elementary school-age children cannot sit still for longer than one minute, on average. And it's suggested that young people and adults shouldn't hold a body posture for longer than 15 to 20 minutes.

As soon as muscle fibers are activated, there are positive effects for body, mind, and soul:

- Blood circulation is increased, organs such as the brain receive more oxygen
- Biochemical messenger substances are released that lead to positive metabolic outcomes (including hormones, proteins, enzymes) for fat and sugar metabolism and promote neuroplasticity (growth and wiring of nerve cells)
- Students are more emotionally engaged and there is a positive impact on school performance

Research supports that low-intensity activities promote good health when done regularly (Banzer 2011; Levine 2002; Burzynska et al. 2014; Altenburg et al. 2015). Jean Piaget, psychologist, showed that sensomotoric skills are foundational to a child's development, and a lack of proprioceptive experiences can lead to issues with posture, concentration, and learning. Conversely, integrating exercise into school life has been linked to improved academic performance.



(Project "Schnecke" by the Ministry of Education in the State Hessen/Germany 2014)

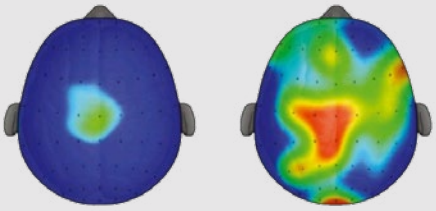
Movement stimulates higher test scores.
Studies show that students with regular movement breaks have significantly better test scores. Even small, responsive changes like flexible seating can improve performance. Movement is integral to thinking and learning, with everyday activities (e.g., fidgeting) being essential for cognitive and physical health.

"Watching a child makes it obvious that **development of body and mind** comes through movement."

– Maria Montessori

Physical activity is not only healthy, it's smart.

Consider the evidence.



No Exercise Exercise

Movement *is the way* **forward.**

Thinking and learning do not just happen in the head. From the moment of birth until an advanced age, the body is an integral part of well-being and of all intellectual processes. This also includes many intuitive activities that most of us are not even aware of and that emerge rather incidentally.

Researchers refer to these as "Non-exercise activity thermogenesis" (NEAT) (Levine 2002). They include all musculature activities that are not consciously organized and include everyday physical activities such as moving a chair back and forth, intuitive changes of position when standing or working on the floor, moving one's hands while talking, and even nervous foot-tapping.

Interior design contributes to an enriched learning environment.
Neuroscientific research highlights how enriched environments stimulate neuroplasticity and enhance learning. An active learning environment improves brain function and memory. Regular physical activity has cognitive benefits, especially for children with ADHD. The benefits of movement extend to long-term health and academic success.

Interaction between an organism and its environment can lead to important neurobehavioral changes – having a powerful effect on brain functions and structure, on learning and memory functions.

(Ickes et al., 2002 / KEMPERMANN et al., 1997 / ROJAS VEGA et al., 2010)

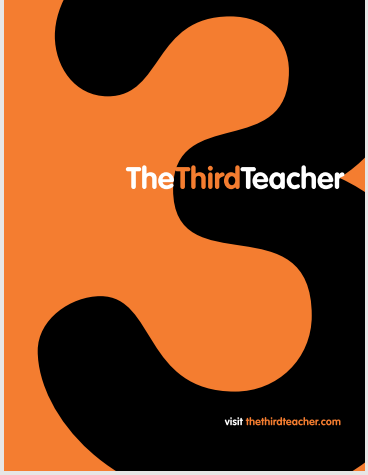
Ergo-dynamic furniture is essential.
Furniture in learning spaces plays a crucial role in influencing learning behavior and social interactions, offering opportunities for posture changes and movement. Research shows that relying solely on traditional furniture, like chairs and tables, leads to physical and mental health issues. Studies highlight the dangers of passive sitting, with low energy expenditure linked to obesity, type II diabetes, high blood pressure, dementia, and even cancer (*Dunstan et al. 2012; Katzmarzyk et al. 2009; Haly et al. 2017; Healy et al. 2008)*. In Western culture, children often sit for up to 10 hours a day, with poor posture, creating a harmful pattern that needs to be addressed.

People aged...

- 6 –10 should not sit more than 5 minutes at a time.
- 11 – 15 should not sit more than 10 minutes at a time.
- 16+ should not sit more than 20 minutes at a time.

A healthy recommendation for the school day.

- 50% sitting (dynamic sitting on agile chairs)
- 30% standing
- 20% movement within the space



The room as the *Third Teacher.*

Architectural features and interior design significantly impact the psycho-physical and social well-being of teachers and students (Tischler, Atzwanger 2000). The interaction between architecture, furnishings, and teaching methods supports natural rhythms and enhances learning, often subconsciously influencing behaviors. For example, Crow Island School in Illinois incorporates design elements such as thematic colors, natural light, low furniture, and flexible spaces to enhance the learning experience and student well-being.

Learning spaces are everywhere.
Change the design mindset from room to learning landscape. Learning shouldn't be confined to classrooms. Flexible spaces, including hallways and nooks, should be used for varied learning activities. The design of the entire school should encourage movement and flexibility, supporting individual, group, and mixed-age learning.

Key Elements to enhance the quality of learning:

To enhance the culture and quality of learning, spaces should:

- Have a physically and mentally inviting character – encouraging postural changes, change of spaces, and student-centered learning
- Offer organizing guidance – spaces for individual retreat (concentration, relaxation), social interactions (discussion, communication), storage compartments, and more
- Enable different perspectives – when students experience different points of view from fellow students, it facilitates a better understanding of a subject
- Challenge various sensory perceptions – learning content shouldn't only be seen and heard, but should be experienced in a concrete way with hands-on learning

A school building is more than just an architectural structure; it provides an important framework for the school's ambiance and helps ensure the best possible conditions for educational success.

Spatial proficiency —— *bridging* space *and* pedagogy.

Revealing the roots of learning spaces – where unseen elements nourish visible growth.

There's a lot to see in a school's learning spaces, from the mats, cubbies, and tables of early childhood education to the desks, chairs, and whiteboards of higher grades. But what's visible to the eye in a classroom is like the branches and leaves of a tree: the above-ground parts of a complex organism.

What's unseen shapes how learning grows.

Below the surface of any learning space is a web of elements that, like the root system of a tree, anchors and nourishes the whole organism. This network of instructional practices, daily routines, learner-educator relationships, and design sensibilities may go unnoticed by the casual observer. However, the skilled educator is aware that, like the water and nutrients drawn up from the soil by a tree, the unseen elements of a learning space influence the growth and flourishing of both teachers and learners.

This is the foundation of **spatial proficiency,** a framework that explores how space, practice, and pedagogy intertwine to support meaningful learning experiences from the ground up.

The intentional setup and use of classroom spaces to support teaching methods, engage students, and support deeper learning.

Physical space ***holds unseen potential.***

Adapted from *Spatial Proficiency* by Jill Ackers and Dr. Hilary E. Hughes.

Becoming spatially proficient
building the skills to align space with teaching.

As a pedagogical practice, spatial proficiency is first about developing an awareness of the unseen or overlooked elements of learning spaces. Then, it's about building the skills to design space intentionally so it elevates teaching and learning. That's the process of becoming spatially proficient.

Building foundations to empower students.
It's a process and practice that's important for those who believe schools can and should be communities of possibility, rather than just locations for instruction. It's how we give shape and substance to our visions for the future of learning. To become spatially proficient is to establish the foundation on which we can create a space where students feel safe, supported, and empowered.

This work is about aligning the physical environment with *pedagogical values*.

Treat space as an active dimension of teaching and learning.

Make the environment part of the lesson flow.

Recognize that spatial layouts are not neutral.

Assessing the importance *of* spatial proficiency.

From theory to practice: making space work.

All students have the ability and desire to engage – it's how humans learn and grow. While the teacher and lesson shape the conditions for learning, the physical space either amplifies or constrains those efforts. A classroom designed with spatial proficiency and intentional furniture choices unlocks the teacher's potential, supporting students by moving them from recipients of instruction to active contributors in learning.

This is why spatial proficiency matters. Without a teacher who is spatially proficient, the power of space remains untapped. But when educators use environments intentionally designed to enhance communication and collaboration, research shows the results are profound. Designing and using space in this way is the pedagogical practice we call spatial proficiency.

That said, knowing what's possible and putting it into action are two different things. What makes spatial proficiency not only possible but sustainable in schools and classrooms is having the right furniture as a physical tool. A spatially proficient classroom is not static; it is alive and attends to the rhythms and needs of the learners within it.

Mobile folding tables create flexible spaces for group work and nest easily when not in use.

Mobile, durable storage makes it easy to create zones and organize resources.

Writable surfaces invite students to explore and express ideas.

Mobile desks enable flexible layouts that are easily rearranged to suit lessons and learners.

In spatially proficient classrooms, ***furniture becomes part of the instructional ecology.***

Choosing the right furniture for the campus and hippocampus.

Let's start with a concept

everyone loves — choice.

Size Guide

	2	3	4	5	6	7

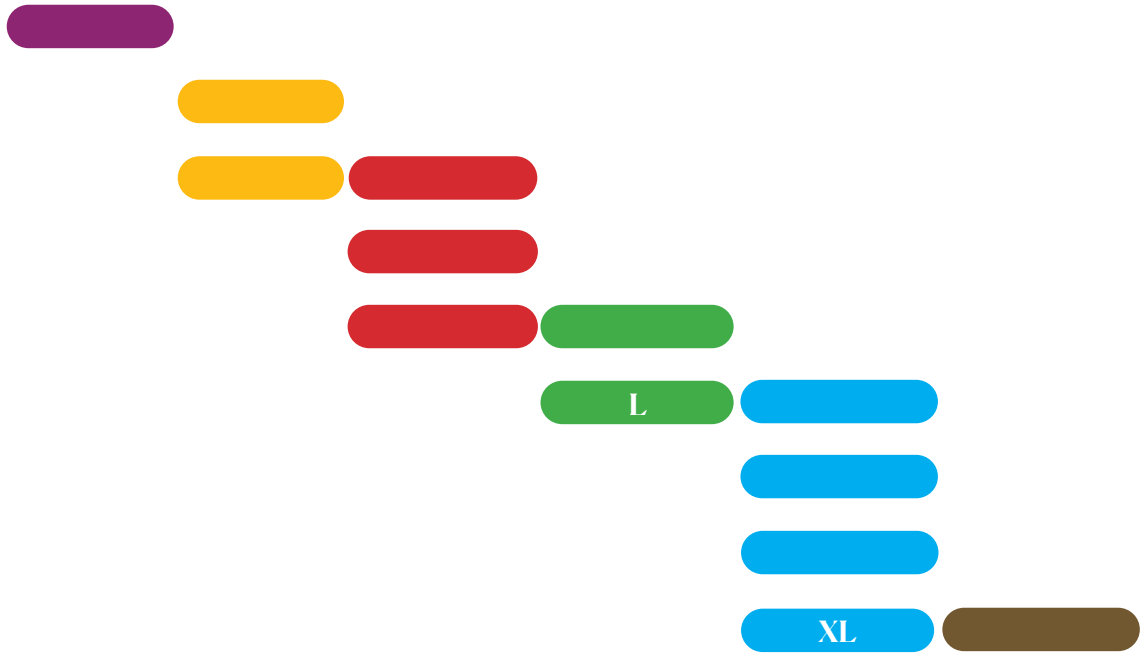
Shell Size	S		M *(Comfort L)*		L *(Comfort XL)*	XL
Seat Height	12.25	13.8	15	16.95	18.15	20.1
Table Height	20.9	23.25	25.2	28	29.95	32.3
Standing Table Height			34.65		41.75	47.25

Recommendations *by Grade Level*



Size Guide Recommendation:

One size ***does not*** fit all—customizing seating and tables enhances collaboration and productivity.

Choosing *the right* **sizes** *for* ***you.***

VS' tables and chairs are ergonomically designed. Their outstanding ergonomic properties are confirmed by the quality label awarded by the Healthy Back Campaign *(Aktion Gesunder Rücken e.V.)*.

Correct sitting and ergonomic working can only be achieved when the student's chair is regularly adapted to suit their height. In the DIN EN 1729 standard, body height and seat/table height have been correlated and six table and seat sizes have been determined. The decisive factor is the regular checking of the size and individual selection because the height of students in one class depends on their individual development and can vary considerably. In other words, each student needs a chair and table which suits his or her height.

Children vary in size. This is why they often sit at furniture combinations that are not suited for them. Appropriately sized furniture is essential for optimum concentration levels and growth. Without correctly sized furniture, students could suffer from posture damage, and head and back pain.

The six chair sizes can be easily recognized by their colored dots. They range from a seat height of 12.25 inches in size 2 up to a seat height of 20.1 inches in size 7. The corresponding sit at table heights range from 20.9 inches to 32.3 inches. This range provides students, whether they are 3 foot 6 inches or 6 foot 9 inches tall, with the correct sitting and working conditions.

Seating *opens up the* conversation.

When you specify chairs, they should enable a high degree of freedom in your learning space. Easily adjustable to individual body heights. And flexible enough to respond to free flowing body movements.

It's key to understand that students at any age are not able to sit still for long periods of time. Having the ability to sit, stand, and move around is always optimal for healthy, growing, and often fidgety bodies. That's why chairs should not be used for long-term sitting and should feature agile, three-dimensional sitting, enabling micro and macro movements.

Multi-dimensional seat mobility promotes the right kinds of complex interactions between legs, pelvis, spine, shoulders, and head. In particular, "unlocking" of the pelvis is very important. The biomechanical analysis of the body shows pelvic movement activates the entire muscular and skeletal systems, benefiting the body in myriad ways.

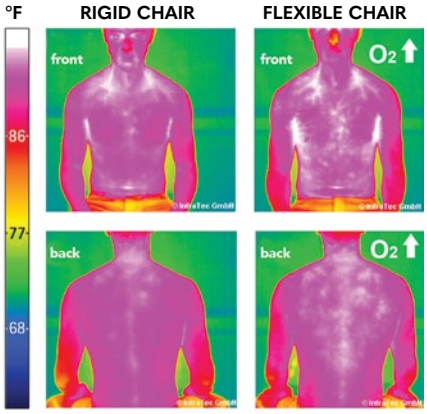


FIGURE FROM: LUDWIG AND BREITHECKER 2008

On the top right quadrant, you'll see a significant increase of oxygen supply while seated on a chair with 3D function. Compare this image to the left-hand side, which shows how sitting in a rigid chair leads to deficient circulation.

Seating

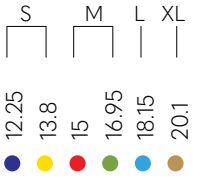
JUMPER® Air Active

Forward-flexing cantilever chair.

Plastic Colors

Frame Colors

33400



Available in all 6 heights with 4 seat shell sizes, making this the perfect chair for every student.

(All sizes in inches)

The forward-flexing cantilever **JUMPER Air Active** is particularly suitable for school use. When the student is in the working position at a desk, the seat surface tilts forward. This opens the angle of the hips and helps position the spine into the correct posture. The shell also tilts whenever the student leans back to relax, or listen to a lecture, actively helping to relieve built-up tension. This encourages dynamic, natural body movement - promoting well-being and improving concentration.

Glides

With the right glides, the **JUMPER Active** is perfectly equipped for any floor. 2-component universal glides are specifically designed by VS to protect hard floors, yet can be used on all floor types. Plastic glides are recommended for carpeted floors, and felt glides are another option for hard floors.

2-Component Plastic Felt

A welded cross-strut between the skids provides extra stability for school use.

The **JUMPER Air** seat shell is made from double-walled, structured polypropylene for comfortable sitting with air-cushion effect.

JUMPER Active can be stacked up to a height of 5 chairs.

JUMPER Air Active is Cradle to Cradle Certified™.

The **JUMPER** chairs won the GOOD DESIGN® Award.

JUMPER Active can easily nest on a desk. Alternately, if the desks are equipped accordingly, the chair can be suspended below the desk top.

JUMPER® Air Move

Height-adjustable swivel chair and stool.

Plastic Colors

Frame Colors

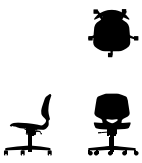
Kiga



33537
h: 13.75 - 17.25

(All sizes in inches)

The **JUMPER Air Move** chairs and stools are height adjustable, so the seat height can quickly and easily be changed according to individual requirements.

The **JUMPER Move** is designed for use at seated tables, while the **JUMPER Move Plus** has a taller range of adjustability for use at sit-to-stand and standing tables. The kindergarten teacher model (Kiga) adjusts lower to support eye-level interaction with young children.

3D Rocking Mechanism

The **JUMPER Air Move** has a patented 3D rocking mechanism for even greater dynamic sitting. The seat area reacts to every change of weight and leans gently forward, backward, or sideways. In this way, it continuously supports changes between different sitting positions in an ergonomically sensible way.

Chairs/stools can be suspended to allow for easier cleaning of the floor and tabletop.

JUMPER Move Plus: continuous height adjustment of foot ring.

Casters

Soft casters for use on hard floors.

Hard casters for use on carpet.

Glides

2-Component Plastic Felt

JUMPER® Air Four

Four-legged chair.

The **JUMPER Air Four** is a classic four-legged chair that can be used in many different situations. It's very stable and strong, while ensuring extremely comfortable sitting - even in the smallest seat sizes for preschool and elementary school.

The chair is also suitable for multipurpose use in shared spaces, such as cafeterias, auditoriums, classrooms, and workrooms - where it can be used by students and teachers alike.

Stackable

The **JUMPER Four** chair is stackable up to 5 chairs and moved easily with a hand truck.

The **JUMPER Air Stool** line offers a perfect blend of design and functionality. The stools come in a variety of frame and height options and feature a double-walled polypropylene seat for comfortable sitting with an air-cushion effect.

Height-Adjustable Swivel Stool
Continuously adjustable in height, the swivel stool has a 360° rotation which ensures freedom of movement, making it the ideal choice for dynamic, modern classrooms.

Glides
With the right glides, the **JUMPER Air Stool** is perfectly equipped for any floor. 2-component universal glides are specifically designed by VS to protect hard floors, yet can be used on all floor types. Plastic glides are recommended for carpeted floors, and felt glides are another option for hard floors.

2-Component | Plastic | Felt

Four-Legged Stool
With casters, the four-legged stool is available in 1 fixed height. With glides, the four-legged stool is available in 5 fixed heights. Both stools, on casters or glides, are stackable up to 10.

Hard casters for use on carpet.

Soft casters for use on hard floors.

JUMPER Air Stool Plus
Available in 5 heights, the **JUMPER Air Stool Plus** is perfect for high sitting and has a footrest for ultimate comfort.

The **JUMPER Air Stool Plus** can be stacked up to a height of 7 stools.

Ply & Upholstered Options
The **JUMPER Stool** is also available with a stained, molded beech plywood seat or in upholstered models.

PantoSwing-LuPo

Forward-flexing cantilever chair.

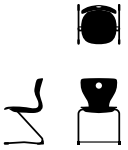
With this chair, a change of position changes the inclination of the seat – in the forward-sitting position, the seat also inclines forward, which stimulates the spine to balance dynamically and also stabilizes posture. The **PantoSwing's** dynamic seat encourages regular changes of sitting positions, which is very important ergonomically. Such dynamic sitting has been shown to activate both the body and mind, and to increase the attention of students.

Glides

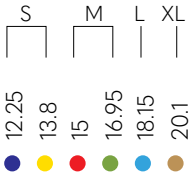
With the right glides, the **PantoSwing** is perfectly equipped for any floor. 2-component universal glides are specifically designed by VS to protect hard floors, yet can be used on all floor types. Plastic glides are recommended for carpeted floors, and felt glides are another option for hard floors.

Plastic Colors

Frame Colors



31400



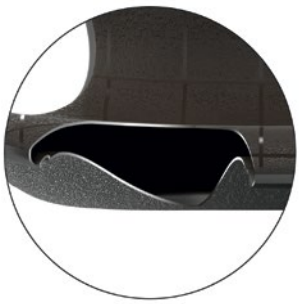
Available in all 6 heights with 4 seat shell sizes, making this the perfect chair for every student.

(All sizes in inches)

PantoSwing-LuPo is Cradle to Cradle Certified™.

2-Component Plastic Felt

Durability
Material and load tests are carried out in our own testing labs to ensure the utmost quality and durability, and products are also tested by external test institutes.



Double Walled Plastic
The **PantoSwing** seat shell is made of double-walled textured polypropylene for comfortable sitting with an air-cushion effect.

12-Gauge Steel
The **PantoSwing** is made from bent, powder-coated or chrome-plated round steel tubing.

Putting Chairs on Tables
The **PantoSwing** can be fitted with an optional table-edge protector for piggyback chair mounting.

PantoMove-LuPo

Height-adjustable swivel chair and stool.

The **PantoMove** and **PantoMove-Plus** chairs are height adjustable, so the seat height can quickly and easily be changed according to individual requirements.

The **PantoMove** is designed for use at seated tables, while the **PantoMove-Plus** has a taller range of adjustability for use at sit-to-stand and standing tables. The kindergarten teacher model (Kiga) adjusts lower to support eye-level interaction with young children.

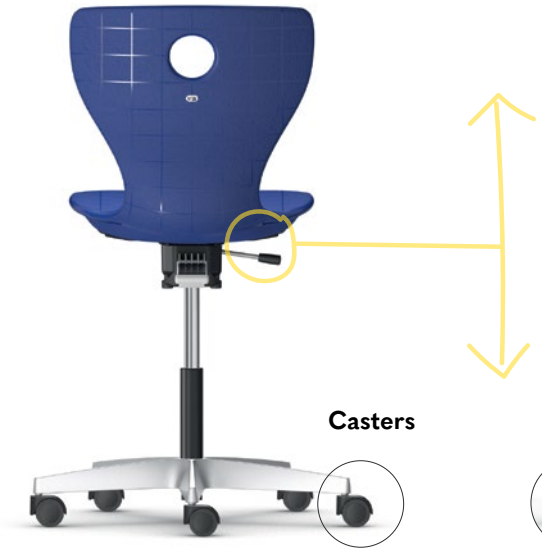
3D Rocking Mechanism
The **PantoMove** has a patented 3D rocking mechanism for even greater dynamic sitting. The seat area reacts to every change of weight and leans gently forward, backward, or sideways. In this way, it continuously supports changes between different sitting positions in an ergonomically sensible way.

Chair Hanging
Many models of the **PantoMove** come standard with a piggyback hook for chair suspension on tabletops. The underside of the hook is made of non-slip material. That way the chair stays firmly on the tabletop and the surface of the table is protected, allowing for easy cleaning of the floor and tabletop.

Adjustable Foot Ring
The **PantoMove** and **PantoMove-Plus** can be fitted with a patented adjustable foot ring. With the touch of a button it can be positioned so that the feet can be placed at exactly the right height when sitting, taking the strain off the thighs.



Casters

Hard casters for use on carpet.

Soft casters for use on hard floors.

VS Stakki

Three-legged indoor/outdoor chair.

VS Stakki is lightweight, easy to clean, stackable up to 7, and practical for indoor and outdoor use in educational environments, cafeterias, or offices. Designed by Martin Ballendat with sustainability in mind, **VS Stakki** is made from a single part, and consists of 100% recycled material.

VS Stakki is made from stable, durable, and extremely scratch-resistant glass-fiber reinforced polypropylene. Even though it weighs less than 9 pounds, **VS Stakki** offers a very high level of stability.

Plastic Colors

03811

15 18.15

Available in 2 heights.
(All sizes in inches)

Sitting Freedom
VS Stakki permits a wide range of positions, whether sitting towards the front, the side, the back, or at an angle. People can sit on **VS Stakki** from every side and still enjoy the same ergonomic comfort. The chair seat has a small surface, but it is exactly the right amount to ensure all-round sitting comfort.

LuPoStool

Skid stool.

Versatile and durable, the **LuPoStool** comes in 3 heights and keeps lab spaces organized and clutter-free. The seat is made of double-walled polypropylene, ensuring comfortable sitting with an air-cushion effect, and the taller 2 heights come with a footrest for added support.

The **LuPoStool** is available with or without a backrest, allowing you to customize the support to fit your needs.

(All sizes in inches)

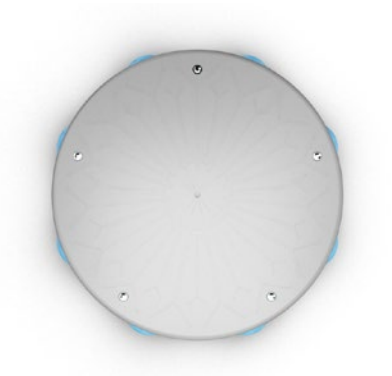
The **Hokki** stool by VS is a true original, with an innovative design that allows you to easily and safely move without tipping over. Engineered for incredible stability, the **Hokki** wobble stool is very safe to use.

Easy Transport

The **Hokki** stool is light and easy to carry, as well as stackable for a way to quickly maximize your space.

Hokki+
The **Hokki+** is the height-adjustable Hokki, available with a height adjustment range of 15 to 19.7 inches or 19.7 to 26.8 inches. The **Hokki+** has a gas spring height adjustment with anti-twist protector, resulting in overall stability and seating comfort. The adjustment mechanism is immediately accessible and can be triggered from any position.



Iconic Wobble
The **Hokki** is designed to promote flexibility and freedom of movement. The floor safe rubber base of the **Hokki** features a convex shape, allowing for a natural, 360° range of motion. This added motion and balance makes it easy to stay focused and engaged, perfect for students and professionals alike.

Durability
100% recyclable and constructed with a stable and highly scratch-resistant polypropylene. The **Hokki** stool goes through vigorous testing to ensure a high quality, safe, and durable product that holds up to the demands of students.

Scalloped Edge
The **Hokki** stool has a unique scalloped edge, allowing for an innovative hang-on desk feature – perfect for saving space.

ClubLounge

Soft seating elements.

The **ClubLounge** collection makes it easy to create customized seating landscapes that support a variety of activities and preferences. Sofas, benches, lounge chairs, stools, and corner elements are available in 2 seat heights and can be combined to create everything from collaborative gathering spaces to quiet retreat areas.

Crafted with flame-resistant, easy-to-clean materials, elements are perfectly suited for the everyday stresses and strains of school life.

The table element is designed like a stool and has a powder-coated steel sheet metal top for a convenient table surface.

The add-on standing table creates opportunities for tiered learning through varied seating and table heights, supporting a range of postures and activities.

Elements can be fixed to the floor if desired.

The 3-sided enclosure creates a comfortable retreat space for focused work and reflection.

Watch David's thought starters and product tutorials.

"The elements of Shift+ ***allow educators*** to continually find ***new applications.***"

– David A. Stubbs II, Designer of Shift+

Recreating *the* learning environment.

Shift+ is a unique set of tools, enabling educators to easily create their own environments. All of the **Shift+** furniture adapts to a multitude of teaching and learning styles simultaneously, fulfilling the needs of the specific occupants of the space at a precise point in time.

Our goal is to allow educators to begin with a blank canvas by selecting a set of tools that respond to their specific learning and teaching environments. From there they can efficiently move selected accessories in and out of the space depending on what they are trying to accomplish.

With **Shift+**, students and teachers are in a position to make new configurations themselves, without having to call on others for assistance.

Shift+ uniquely allows us to support the unlimited variety of learning possibilities and teaching styles in the most simplistic way possible. Every component within the **Shift+** family is light, mobile, and can be easily reorganized. They can be efficiently stacked, creating open areas. They are not constrained to a specific educational space – they are specifically designed to be transitioned and re-purposed throughout a school facility.

Shift+

Shift+ Landscape

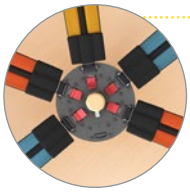
Padded mats and Leaf tent elements.

Shift+ Landscape padded mats can be used to quickly create environments for floor-level learning and are perfect for lying, sitting, or kneeling. When paired with the **Leaf** tent elements, it's easy to create separate areas for individual children or small groups.

Leaf Colors

Padded Mat Colors

** Also available in other fabrics and colors.*



The top of the pole can be used to fix a maximum of six sails.

Leaf can be easily rolled up and fastened with velcro fasteners.

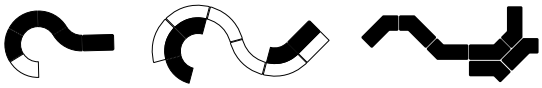
Soft seating elements.



With the **Landscape** soft seating elements, learning environments and differentiated zones can be simply and quickly formed. Available in straight, curved, or angled shapes, the elements can be freely combined to create dynamic seating arrangements, from circular designs to flowing, undulating forms.

Resistant and durable, Stamskin is a material that is extremely easy to clean by simply washing with a mild cleaner to restore the fabric to its original appearance. Also available in other fabric choices – see Materials section.

Dynamic Layouts

Landscape elements are available in different shapes and heights, providing versatile solutions for creating informal group seating areas.

Seats **worthy** *of a* **sigh.**

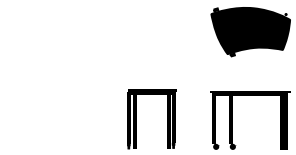
Soft seating or lounge furnishings support the natural and changing need for hard work and recovery as well as excitement and relaxation. Depending on the work, they can also be used for relaxed and informal sharing or information processing, such as reading a book, quiet work, and more.

Shift+ ThumbPrint

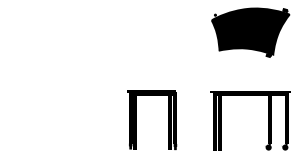
Stackable four-legged tables (concave/convex).

Laminate Colors

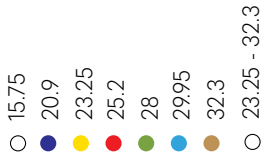
Frame Colors



01440
w x d: 38.15 x 21.3 / 15.4

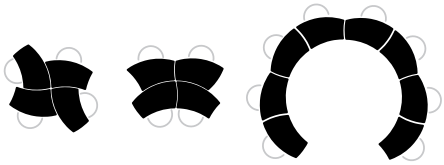


01441
w x d: 38.8 x 21.3 / 15.35



Available in 7 heights or with step height adjustment.

(All sizes in inches)



What makes this elegant, easy to move student's table so special? For starters, the sides mirror one another with their concave or convex design. Their curved, basic form results in a variety of combinations - including circles, rows, and freely shaped groups. The tables can also be equipped with 2 lockable casters for easy mobility. Up to 6 tables can be stacked and include stacking protection on the underside of the frame.

Tabletop Protector

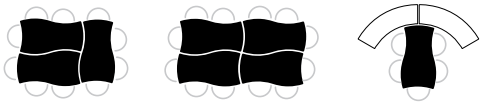
Each table is fitted with stacking protection on the underside of the frame, ensuring tables are protected while stacked and not in use.

Glides or Casters

Tables available with plastic, felt, or 2-component universal glides, or 2 glides and 2 lockable casters.

Shift+ Fusion

Freeform group tables.



The **Shift+ Fusion** tables are available as four-legged versions, or with a folding tabletop. The tables can be moved together creating larger sized group tables when needed. Thanks to the casters, they can be arranged easily by students of all ages.

Laminate Colors

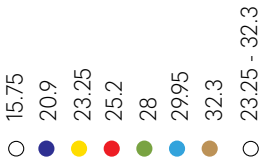
01448
Stackable
w x d: 55.45 x 31.05



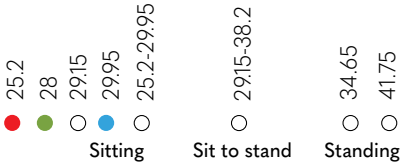
Four-legged version available in 7 heights or with step height adjustment.

(All sizes in inches)

The **Fusion** model 01448 is stackable, so you can stack up to 8 tables.

FusionFlip

01451
w x d: 55.45 x 31.05



FusionFlip available in 4 fixed sitting heights, 2 fixed standing heights, or with step height adjustment.

(All sizes in inches)

The **FusionFlip** is a freeform table with a foldable top (activated using a safety mechanism). This way the tables can be nested together to save space if they are not in use.

Writable Surface Available

FusionFlip tables can be ordered with a writable surface tabletop, creating an additional active space for students to interact with and even present their work in a group setting.

Shift+ Interact

Height-adjustable teacher lectern and student table.

The **Shift+ Interact** is easily moved around the room, thanks to its 4 lockable casters. The compact work surface, available in 2 shapes, ensures unhindered mobility; the optionally integrated bookshelf does not impede freedom of movement. The table is continuously height-adjustable, the desired height can be easily achieved using a hand switch on the tabletop edge. In the model with a square tabletop it is possible to add a modesty screen.

Additional storage needs are covered by a separate teacher storage element, found on the next page.

(All sizes in inches)

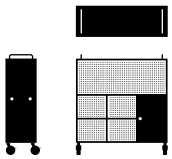
Same Curve
The **Interact** model 01455 has a curved top that fits all of the other Shift+ product curves, so it can nest with other desks and tables in an unlimited set of configurations.

Shift+ Transfer Teach

Mobile cabinet.

Laminate Colors

Frame Colors



45319
w x h x d: 41.55 x 43.4 x 16.75

(All sizes in inches)

The **Transfer Teach** equips the teacher with a mobile storage space with lockable casters. As a freely mobile element, it can accompany the teacher anywhere in the room or building. All elements of Shift+ are designed so that mobility does not end at the door of the classroom.

Lockable Door

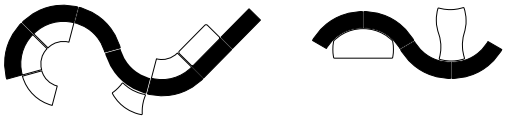
The **Transfer Teach** cabinet is helpful for equipping the teacher with a lockable door. Connecting magnets on each side secure multiple elements together, or they can be used as a standalone unit.

Shift+ Transfer

Mobile shelving and storage cabinets.

Laminate Colors

Frame Colors



The **Transfer** mobile elements are available in 3 heights and in single- or double-sided options. They can be formed into various combinations and paired with the Shift+ Landscape soft seating elements to create defined group areas. The mobile shelving elements can also be equipped to accommodate storage boxes, and some models are available with wardrobe hooks.

The **Transfer** units have bases made from welded steel, providing superior strength and longevity. They also have crossbars across the bottom for exceptional rigidity – ensuring that the shelving elements don't wobble.

Lockable Doors
The **Transfer** cabinets are helpful for equipping any rooms in need of lockable doors. They are available with casters or adjustable feet.

Mix and Match Box Sizes
Any configuration of 3 or 6 inch boxes can be used in **Transfer** units. This means you can mix different sized boxes for the utmost usability for whatever your space requires.

Strong Magnet Connection
Optional connecting magnets on each side secure multiple elements together – allowing a more flexible configuration. Some elements are available with double-sided shelves.

Optionally with adjustable feet on all **Shift+ Transfer** elements.

Creative options *that raise the bar.*

VS tables and desks support dynamic learning environments with durability and versatility. Available in various sizes and configurations, they ensure ergonomic comfort while fostering collaboration.

Height-adjustable flexibility
Lightweight, easily height-adjustable tables promote physiologically positive sitting postures. They can be raised as students grow and therefore don't need replacing over the school year. Individual tables in different shapes on casters can be combined with one another in many different ways and offer individual, rapid changes in forms of learning.

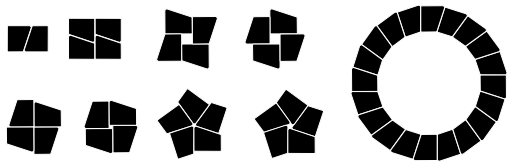
Tables that allow for standing
Standing tables and group standing tables with foot supports – very important for dynamic standing – are important basic furniture for indoor spaces. They encourage spontaneous posture changes (sitting/standing/stand-sitting). Accordingly, they should also be used for standing and not for continuous high sitting. High tables are particularly useful during group work. Ideal non-adjustable standing tables accommodate an average body height for the relevant age group, which means around 35 inches for 3rd to 7th graders and around 42 inches for 8th to 12th graders. Adapting the height precisely to individual users or a group for temporary use is not necessary. They're flexible to accommodate a variety of tasks and can be combined for large or small groups. They can also be moved on casters throughout the school.

Continuously adjustable high chairs with a 3D rocking mechanism and an adjustable foot ring are the perfect complement to standing desks. These can be used for intuitive sitting or stand-sitting, and facilitate eye-to-eye level communication. Rigid seats are not healthy choices and shouldn't be specified.

Tables

Tano

Asymmetrical polygonal student table.



The **Tano** is made from welded round steel legs with a rectangular steel top frame, all powder-coated. The asymmetrical polygonal top allows for quick transformations from student work to group work. The tables can also be equipped with 2 lockable casters for easy mobility. Up to 6 tables can be stacked and include stacking protection on the underside of the frame.

Uno-M desks are available with plastic or 2-component universal glides.

Truth is, schools need a better way to **organize, store, and access their stuff.**

Modular storage solutions

The right storage solution should elegantly organize, unify, and complement any space.

Our modular systems are comprised of storage units crafted to provide personalization and versatility. Each design in our collection lends itself to a range of configurations, allowing you to meet the needs of your space. Whether you need a building-wide storage system, some comprehensive classroom or multipurpose space storage, our solutions allow for a seamless transition while maximizing use of space.

Storage

SpaceStation

High-capacity resource storage.

SpaceStation is the high-capacity anchor of the SPACE system, organizing instructional resources where they make the most sense while keeping them visible and accessible.

SpaceStation elements are fixed steel storage units that attach to the wall and can be connected in a series to scale with resource needs. They can support a single classroom, shared grade-level or program area, or a broader schoolwide resource strategy.

Standard Bins
Bookbins

(All sizes in inches)

Fully Welded Steel
Fully welded steel construction provides a rigid, durable structure.

Four adjustable-height feet provide up to 1.2 inches of leveling range.

All-Around Coverage
Available with a steel rear panel, side panels, and a hinged door with a cylinder lock. Each side panel features a cutout for easy gripping.

Designed for Stability
SpaceStation is built with one continuous frame, providing structural support from top to bottom rather than relying on separate upper and lower frame sections.

By organizing appropriate materials in shared locations, schools can reduce unnecessary duplication and create more usable teaching and learning space. Resources can then be retrieved and moved to where learning happens.

SpaceWalk

Mobile resource storage.

SpaceWalk is the mobile component of the SPACE system, bringing instructional resources from storage areas to where learning happens.

Available in single- and double-sided configurations, **SpaceWalk** keeps materials organized and accessible as activities, groupings, and instructional approaches change throughout the day.

Resources can move with students or teachers between classrooms, shared areas, and learning activities, supporting greater flexibility in how and where instruction happens.

Built to Move
Lockable, dual-wheel swivel casters support easy mobility, while tip performance exceeds applicable industry standards.

SpaceWalk helps students and teachers move organized materials between classrooms, shared areas, and activities.

Fully Welded Steel
Made of bent, fully welded steel, **SpaceWalk** elements are built to last.

Available with a steel rear panel, side panels, and a hinged door with a cylinder lock. Each side panel features a cutout for easy gripping.

Double-sided **SpaceWalk** elements have columns facing opposite sides, making it easy to create niches where students can work from both sides.

SpaceOrbiter

Lower-height mobile resource storage.

SpaceOrbiter brings instructional resources closer to where teaching and learning happen. Its lower 27.6-inch height maintains clear sight lines across the learning space while keeping materials accessible at a height that supports independent use by younger learners.

Built to Move

Lockable, dual-wheel swivel casters support easy mobility, while tip performance exceeds applicable industry standards.

Fully Welded Steel

SpaceOrbiter gives younger learners standing-height access to materials, making resources easier to retrieve and return independently.

SpaceCraft

Removable bins for the SPACE system.

SpaceCraft brings organization inside the SPACE system, using transparent, removable bins and tray inserts to keep instructional resources visible, accessible, and ready to move.

Multiple bin sizes support everything from small components and everyday materials to complete activity sets. Dual labeling provides a ticket window on one side and a textured surface for larger removable labels on the other, making contents easy to identify for educators and learners.

Because the bins lift out of SpaceStation, SpaceWalk, and SpaceOrbiter, resources can stay organized from storage to instruction without being repacked into another container.

Built for Everyday Use
Shatterproof ABS plastic bins deliver durable, long-lasting performance for everyday school use.

Purpose-Built Bookbin
The VS custom bookbin accommodates books, maker, art, STEM, and STEAM materials, with optional dividers to further organize.

4 tray insert options help organize everything from small components to complete activity sets.

Series-800 Mobile

Mobile cabinets.

The **Series 800-Mobile** elements are built for dynamic environments, offering versatile options like swing door cabinets, shelving units, backpack storage, and more. Easy to move, they support flexible layouts while keeping materials organized and accessible.

Laminate Colors

47535
w x h x d: 47.25 x 64.3 x 23.65

(All sizes in inches)

Mobile Swing Door Cabinet
Mobile cabinet with 2 swing doors and a single locking point to keep materials securely stored. Configure the interior with up to 8 shelves to suit a range of storage needs.

Lockable casters allow cabinets to move where needed, then remain securely in place during use.

Mobile Box Cabinet
Mobile cabinet with 3 columns of Gratnells plastic boxes for organized, easy-access storage. Each column can be configured with boxes measuring either 3 or 5.95 inches high for different materials and storage needs.

Guide rails fit Gratnells boxes with or without lids.

Mobile Backpack Cabinet
Dedicated backpack compartments keep personal belongings organized, accessible, and off the classroom floor.

Reshape the conversation.

Mobile screens and room dividers that can be used as writing boards or for display are essential classroom fixtures. As mobile furniture elements, these create changeable learning space configurations, separating spaces both visibly and acoustically.

Mobile Screens

LinkUp

Mobile screen.

LinkUp screens bring adaptability and movement to any space. Available in 2 heights and 2 widths, they offer a flexible display solution that's easy to reposition as needs evolve.

Choose from several finish options: magnetic writable enamel, cork board, cork board with fabric, or fabric with acoustically effective filling. Whether used for brainstorming, space division, or creative expression, **LinkUp** screens keep ideas flowing and spaces dynamic.

Frame Colors

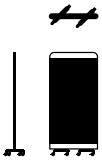
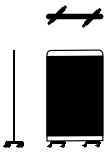
w x h x d: 32.3 x 60.25 x 12.6



05591
w x h x d: 32.3 x 68.15 x 12.6

05594
w x h x d: 40.2 x 60.25 x 12.6

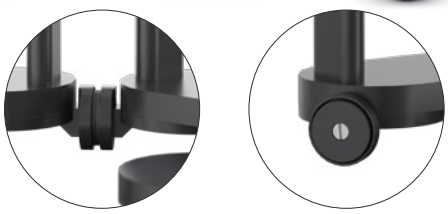


05592
w x h x d: 40.2 x 68.15 x 12.6

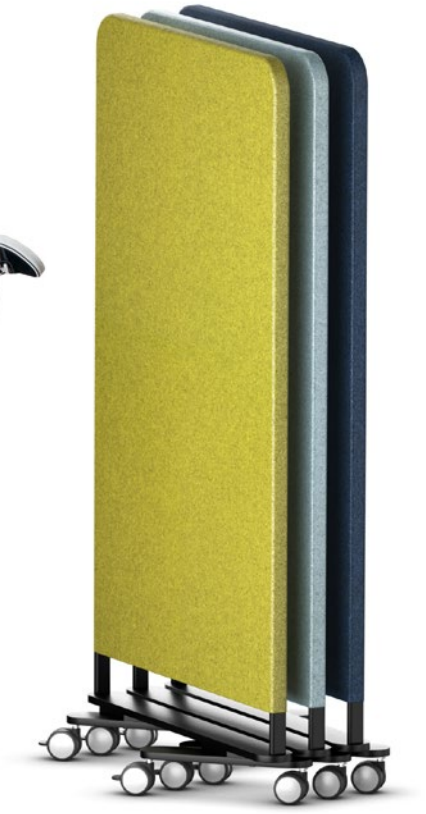
(All sizes in inches)

Lockable Casters
Fully mobile on 4 casters, with 2 casters that can be locked in place for enhanced safety and stability. Designed for flexibility, it easily moves to desired locations and securely locks to provide a stable, private space in any environment.

Writable Surface Available
LinkUp can be ordered with a writable surface, creating an additional active space for students to interact with and even present their work in a group setting.



Optional pivoting magnets easily connect multiple units together.



Their asymmetrical runners allow multiple screens to be nested together to optimize storage.

Materials

Use color **accents** in space planning by coordinating various materials like wood and metal or plastic and laminate surfaces in perfectly harmonizing (or complementary) colors.

Important note: Not all products are available in all colors – ask your VS Territory Manager for more information.

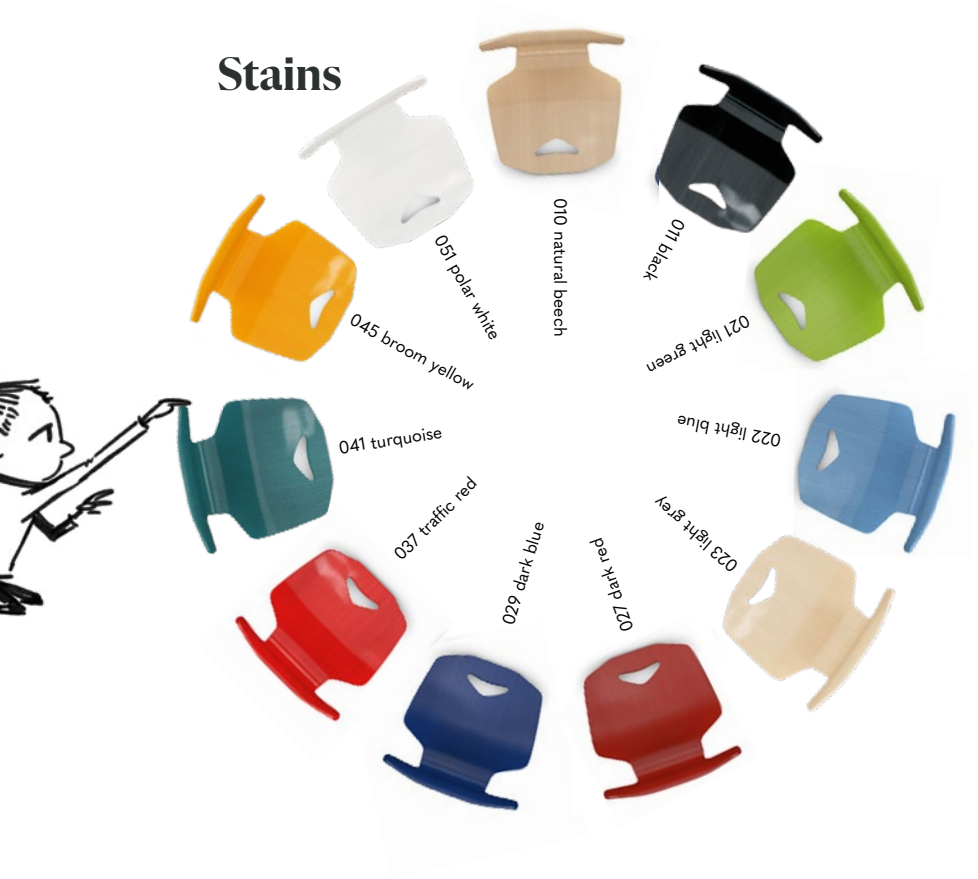
Stains



Laminates

Laminates for tabletops and cabinets are organically integrated into the color palette.

Metals

Steel tubes of table frames or storage elements are included in this interplay of color: subtle variations within the color palette or effective contrasts can be created.

Plastics

Plastic elements like the comfortable, air-cushioned seat shells of the VS chairs offer the option to add colorful accents in the room.

Sustainability

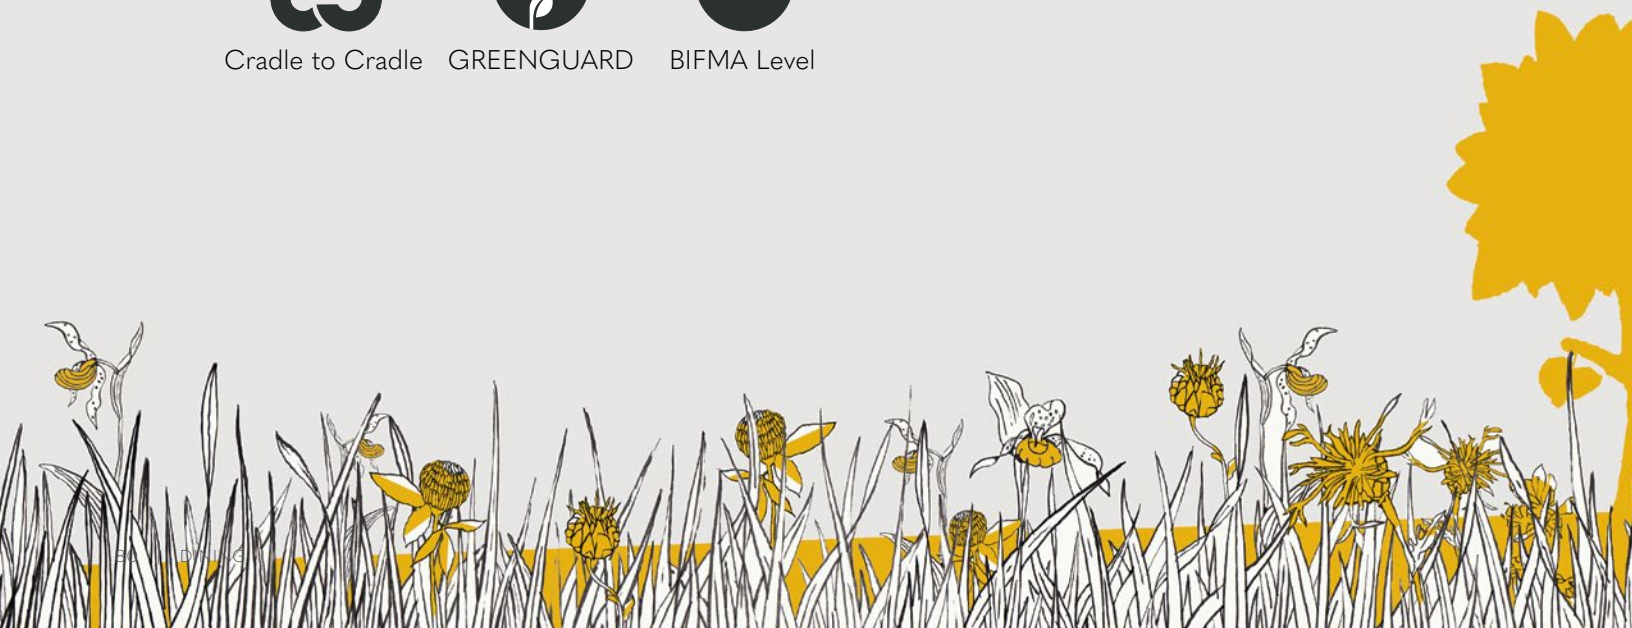
Over a century of sustainability and craft.

For over 125 years, VS has been providing outstanding educational furniture that brings visionary design concepts into the places we learn, work, and play. Although much has changed in the industry over the decades, our fundamentals stay the same. Our long-standing commitment to sustainability and quality craftsmanship remains our mission at VS.

As a company, we have always considered it our responsibility to commit to measures that benefit people, while protecting the natural environment. We offer our customers safe, healthy, long-life products, all manufactured in a way that contributes to environmental protection.

Product certifications include:

Cradle to Cradle GREENGUARD BIFMA Level



VS headquarters, designed by Behnisch Architekten, utilizes high-performance building and design strategies.

We deliberately control our energy consumption by keeping well below the permitted limit values in our new building projects, continuously improving our energy performance. Our gas-fired cogeneration plant covers 36% of our electricity consumption and also provides us with additional heating energy.
