

Material (Colors and decors)

LIGNOdur / Chipboard:

L027 natural beech laminate.

The following materials are used for the production of table tops and carcass furniture:

Three-layer quality chipboard E1 is coated on both sides with melamine resin or laminate decor and complies with DIN EN 312.

LIGNOdur boards are particularly resistant. They are produced exclusively from remnants or chips from solid wood processing and without any other synthetic resins. The boards have a decorative coating on one side and are only manufactured by VS.

High-density boards are particularly resistant. They are produced in the form of laminates (HPL) or from high-density fibres (CDF). The boards are decor-coated on both sides.

Medium-density fibreboards (MDF) are particularly suitable for cut-outs and profiled edges. The boards are melamine resin decor-coated on both sides.

Warning: Print and monitor representations of materials and colour samples may differ from the original and are not binding in terms of colour.
