

**Material (Colors and decors)****Top surfaces: Chipboard
L340 natural oak laminate.**

The following materials are used for the production of table tops and carcass furniture:

Three-layer fine particleboard E1 is coated on both sides with melamine resin or laminate decor and complies with DIN EN 312.

High-density boards are particularly resistant. They are produced in the form of laminates (HPL) or from high-density fibres (CDF).

Medium-density fibreboards (MDF) are particularly suitable for cut-outs and profiled edges. The boards are melamine resin decor-coated on both sides.

Warning: Print and monitor representations of materials and colour samples may differ from the original and are not binding in terms of colour.
